Treatment of incomplete and spontaneous abortions in pregnant women with a later trial of pregnancy. · About the Author. As a clinical instructor at the University of. This paper describes the cause and the effectiveness of treatment of incomplete and spontaneous abortion, and examines the psychological aspects involved. The current findings, although based mainly on the results of. Abortions: Productive or Avoidable? Full text of: B.W. Henderson, P.E. Nielson & R.C. Harris (2003)Abortions: Productive or Avoidable?. Psychological and behavioral aspects of termination of pregnancy. of pregnancy, include a psychosocial examination and interview of women and a physical examination of the uterus of the women. Abortion is performed on both voluntary and involuntary grounds, although the latter is almost entirely restricted to the first trimester of pregnancy. The World Health Organization, in 1968, recommended a limit of 12 weeks gestation of voluntary abortion. This limit was reduced to 20 weeks by the World Health Organization's (WHO) and the International Federation of Gynecology and Obstetrics' (FIGO) joint report of 1969. There is no WHO or FIGO limit on induced abortion for

We don't have a research team working for us. If you've written to us, you've written to us because you've come to us with some piece of trading advice. And we just don't have time to research it, answer your question, and tell you if it's right or wrong. Some of the links in the post above may be affiliate links, so we may get paid if you buy something through them. We have an Amazon referral link you can use too.

Q: Postgres Json In Query I have a json column type in postgres. I would like to query it and get only elements that have a certain key. { "users": [{ "id": 1, "name": "ben" }] } How can i query it with postgresql. I have tried this query but i'm having issues. select * from "users" where "users"."json"->>'id'=1

EDIT: Forgot to mention, I am using Db2 not pg

A: You want to use the jsonb type for this. select * from "users" where "users"."json"->>'id' = 1;

A: MySQL SELECT * FROM users WHERE json_extract(`users`.`json`, '\$.id') = '1';

Postgres SELECT * FROM users WHERE json_extract(`users`.`json`, '\$.id') = '1';

SQL Server SELECT * FROM users WHERE CONVERT(nvarchar(MAX), `users`.`json`, 2) LIKE N'%[1]%' ;

This works only for the predefined types in SQL Server There are two string values in the above example, which you might have to adapt, depending on the type of your users.json. I've just included the example for an ID-based selection.

Worldwide, >160 million people currently have diabetes. A major challenge in diabetes management is that, regardless of type of diabetes, one may experience rapid changes in serum glucose, or may be at increased risk of hypoglycemia when the serum glucose levels are lowered in response to an
