Build powerful communities that are as easy to use as they are fun and engaging with Rocket.Chat. Rocket.Chat is an open source platform that supports everything from real time messaging and live chat to groups, channels and voice calls. With Rocket.Chat, you can communicate via multiple channels (e.g. Facebook, Twitter, Slack, Skype etc.) without having to install any additional apps. Developer Description: Rocket.Chat is a modern web chat solution, offering the ability to send messages, files, links and even voice calls to other users. This chat platform is optimized for real-time communication, offering built-in groups and channels, file transfers and user directory for creating a private network for your community. If you're looking for a simple, powerful and cross-platform chat app, Rocket.Chat is a great choice. Great app! Easy to use. Just downloaded it and already getting some chat action. I did however have a problem with an error when I tried to send someone a voice call, but I was able to fix it with the support. You can check it out here: [Https://chat.rocket.chat/](https://chat.rocket.chat/) If you want to have a easy-to-use but powerful instant messaging solution on your desktop or mobile device, I highly recommend Rocket.Chat. The app is easy to use, free and very customizable. As an avid Slack user and always getting annoyed with the same set of issues, I decided to try out Rocket.Chat and it's working like a charm so far. I've been using it for a couple of weeks now and I can safely say it's the easiest chat I have ever used. It's working well. We're using it at work to handle our channels and it is the best we've had, far superior to a messaging platform that it replaced. I was able to move all of the existing chats we were using with that messaging platform into it, and it was a seamless transition. Here's a few of the features that I like: - very easy to add a voice or video chat channel. - you can give multiple users the ability to host a channel. - easy integration with 3rd party services (e.g. GitLab) - you can take chat histories and list them. - you can moderate channels (for example, you can set an expiration date on a channel to stop it from being available after a specified date). - you can create groups
