

Water Storage Tank, Basins, and Road Safety Equipment: Rotomoulders' Full Product Range

Most buyers know **Rotomoulders Ltd** for their [water storage tank](#) range. Fewer know that the same Enterprise Road facility manufactures road safety equipment, home decor products, material handling containers, and agricultural supplies — all through the same rotational moulding process, all to the same quality standard. For institutions and businesses that source across multiple categories, this breadth matters.

[Water tanks Nairobi](#) and [water tanks in Kenya](#) remain the core of the Rotomoulders business. But the product catalogue at their [online shop](#) reflects 25 water storage products, 51 waste and sanitation products, 24 road safety items, and 128 material handling products — a manufacturing operation that has diversified well beyond the tank that started it.

Best Plastic Basin Prices In Kenya and Home Products

Best plastic basin prices in Kenya buyers are often surprised to find Rotomoulders in this category. The **home decor range** covers basins, planters, and household plastic products — manufactured to the same quality standard as the industrial products, which means better durability than most consumer alternatives at comparable price points.

Plastic tanks manufacturers in Kenya who apply industrial manufacturing standards to household products produce items that last longer than injection-moulded consumer goods. Rotomoulders occupies this space — the process that builds a 10,000-litre tank builds a household basin with the same attention to material grade and wall integrity.

Road Safety and Material Handling From the Same Facility

The **road safety range** covers traffic cones, barriers, water-filled barricades, and safety equipment for construction sites and road works — roto-moulded for the same durability the water tank range is known for. Water-filled barriers in particular benefit from the roto-moulding process: the complex hollow geometry holds water ballast while maintaining structural integrity under vehicle impact.

Top quality roto ball roller 90 litres from the material handling range sits within a catalogue of 128 products — drums, containers, pallets, and handling equipment for industrial and agricultural applications.

Underground plastic tank installation Kenya buyers who also manage site logistics often find the material handling range as relevant to their operation as the storage tanks.

The full range — **water storage**, **waste and sanitation**, **road safety**, **home decor**, and material handling — is available through the Rotomoulders **online shop** with delivery across Kenya and East Africa.
